

AI Speech Tutor & Toolset

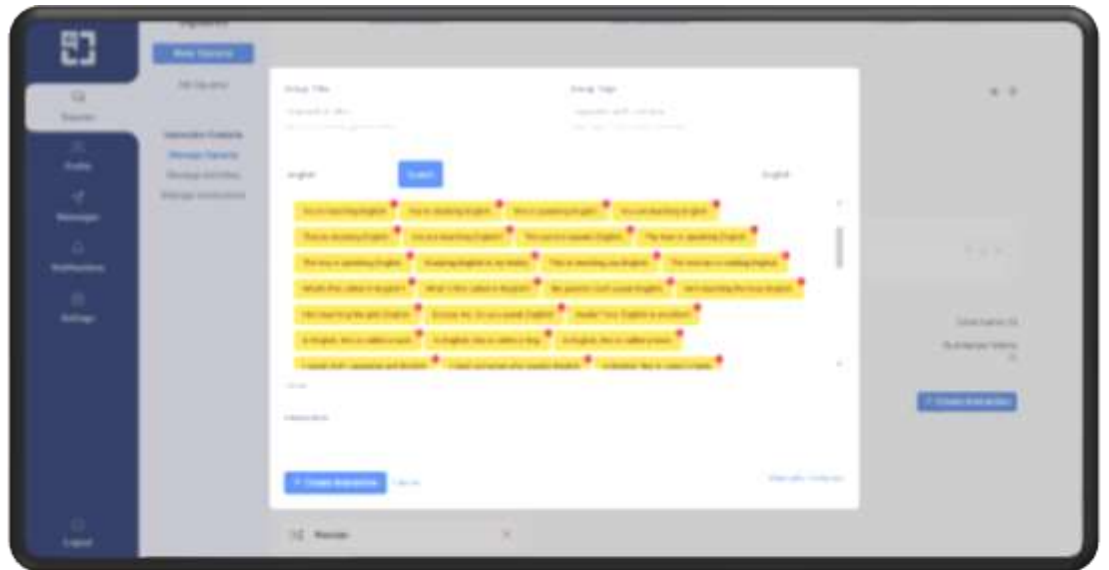

Our AI identifies segments of speech which need improvement, providing learners with personalized feedback and instructors with valuable analytics.

How It Works

Our unique AI speech tutor has use cases from **language learning** and **speech therapy** to corporate **learning & development** !

-  Search by subject, keyword or upload your own lesson plans.
-  Our AI auto-generates contextual interactions for your students.
-  Students interact and are tutored, while you receive valuable analytics.

Tutoring Features

Available in **14 Languages** we implement feature-rich **automatic AI feedback** & **tutoring systems** for your students.

What Makes Us Unique?

Our **AI speech recognition** replaces outdated waveform comparison which break when taking gender, accent and environment into account.

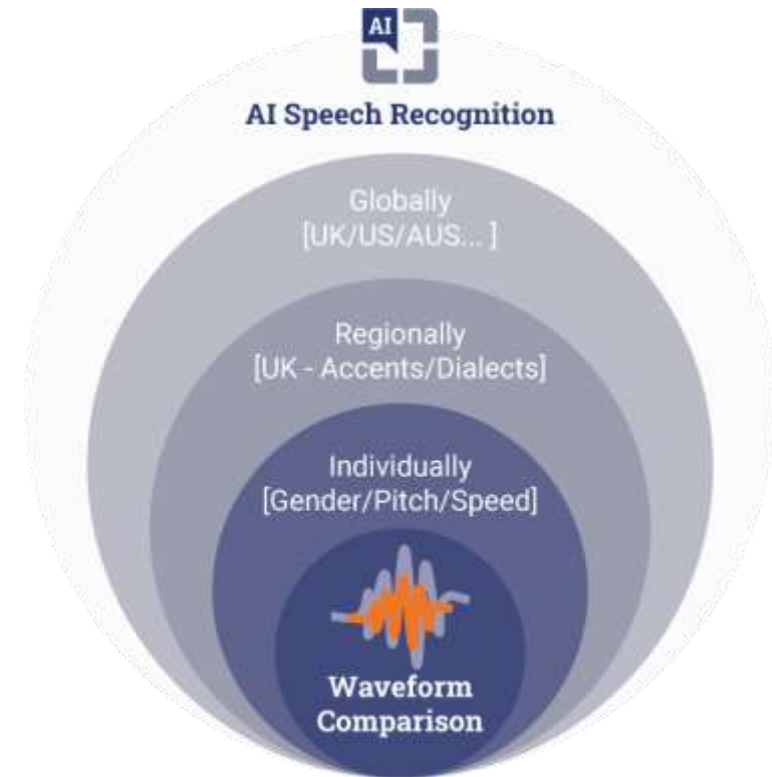

Let's take English as an example, globally there are many accepted variations with even more when drilling down regionally. By removing irrelevant differences in speech analysis we ensure your learners are understood, and not just compared.

AI Speech Recognition

Neural Networks break down user voice input into smaller segments which are analysed against common speech-patterns, outputting the most probable words.

Waveform Comparison

User voice input is compared against a prerecorded sample. For example, a British Woman saying "Hello" would have a reduced accuracy score when compared to an Australian Male.

We Put Education First

It's simple... **first the Ed** then the **Tech**! We empower the learners of all our partners by aligning our solutions with their **current curriculum** and **pedagogical goals**. Just as it should always be!

Our solutions work with your current learning environment

Improve engagement with insightful student reports

Increase productivity with AI generated contextual content
